

Sarah Bendavid

Full-stack Developer
Product Engineer / UI & UX designer

Originally trained with a degree in psychology, I was always intrigued throughout my studies by the analogy between the human brain and the workings of a computer. However, being a perfectionist and striving for accuracy, I turned away from the study of human behavior and towards a more precise science. Indeed, it was in development that I truly flourished, making a complete career change. Nevertheless, my initial training in the humanities allows me to better understand user needs. These combined strengths have enabled me to undertake a variety of projects.
